

## First visit to Centro de Atencion Multiple 11

As a team we agreed to start searching information about our project to help people with hearing problems, so we contacted the director of the Centro de Atencion Multiple 11 (CAM), so we scheduled an appointment to go on February 5, where we told the director that we had a project of the Human Computer interaction subject and that we would like to work with the school to find a way to help them which she found interesting and helped us with some doubts we had, but she told us that we needed to have a document endorsed by the SEP where they would give us the authorization to access Information and facilities.

That same day we went to the SEP to transmit the document, there they told us what we needed from our faculty directed to the SEP for the procedure of the document.
